

CITY OF
Deltona

Municipal Impact Fee Study

June 11, 2026

June 11, 2026

Honorable Mayor and
Members of the City Commission
City of Deltona
2345 Providence Boulevard
Deltona, Florida 32725

Subject: **Municipal Impact Fee Study**

Ladies and Gentlemen:

Raftelis Financial Consultants, Inc. (“Raftelis”) has completed our study of the municipal impact fees for police, fire, parks and recreation, general government and administrative services, and transportation / complete streets (collectively the “Municipal Impact Fees”) for the City of Deltona, Florida (the “City”) and have summarized the results of our analysis, assumptions, and conclusions in this report, which is submitted for your consideration. This report summarizes the basis for the calculated municipal impact fees, which provide funds to help meet the City’s growth-related capital expenditure requirements. Additionally, the calculated impact fees represent the maximum charge the City could implement based on a review of the City’s assets, near-term capital expenditure requirements, industry guidelines, and best practices, as well as the City’s Levels of Service (“LOS”) and policy objectives. The maximum charge is by no means a required fee, but rather the maximum fee that can be cost-justified based on our analysis that the City may elect to adopt fully or partly.

During the course of the study, it was determined that the calculated impact fees should meet a number of goals and objectives. These goals and objectives primarily deal with fee sufficiency and level. Specifically, the major objectives considered in this study include:

- The calculated impact fees should be designed based on the projected capital requirements associated with providing service capacity related to new growth and development;
- The calculated impact fees should not be used to fund existing deficiencies in operating or capital needs of the City, if any;
- The calculated impact fees should be based upon a reasonable level of service standards that meet the needs of the City and are comparable to industry standards; and
- The calculated impact fees should be developed in accordance with industry guidelines and best practices.

The municipal impact fees presented in this report are designed to meet these objectives. As such, based on information provided by City staff and the assumptions and considerations set forth in this report, Raftelis considers the calculated fees to be cost-based, reasonable, and representative of the capital funding requirements of the City’s municipal services that are related to providing service to new development.

Honorable Mayor and Members of the City Commission

City of Deltona

June 11, 2026

Executive Summary and Conclusions

EXECUTIVE SUMMARY

The purpose of an impact fee is to assign growth-related capital costs to the new development responsible for such costs. To the extent that new population growth and associated development imposes identifiable capital costs related to municipal services, equity and modern capital funding practices suggest the use of impact fees to fund such costs. Recognizing the value of funding provided by impact fees, the City has decided to review and update its existing municipal impact fees and implement an additional fee as well. To assist the City with this evaluation, Raftelis was retained to develop impact fees for police, fire, parks and recreation, general government and administrative services, and complete streets.

Based on the details set forth in subsequent discussions in this report, the following table summarizes the existing and calculated impact fees for residential development as follows:

Calculated Residential Municipal Impact Fees		
Description	Existing Fee per Unit [1]	Calculated Fee per Unit [2]
Single-family Fee Type:		
Police	\$119.70	\$143.00
Fire	233.70	1,086.00
Parks and Recreation	1,539.90	1,976.00
General Governmental and Administrative	N/A	302.00
Complete Streets	1,044.00	1,563.00
Total Calculated fee per Unit	<u>\$2,937.30</u>	<u>\$5,070.00</u>
Multi-family Fee Type:		
Police	\$94.50	\$130.00
Fire	184.50	991.00
Parks and Recreation	830.50	1,804.00
General Governmental and Administrative	N/A	276.00
Complete Streets	888.00	1,425.00
Total Calculated fee per Unit	<u>\$1,997.50</u>	<u>\$4,629.00</u>
<p>[1] Amounts shown for existing single-family fees based on assumption of 1,900 square feet per unit and for multi-family fees based on 1,500 square feet per unit.</p> <p>[2] Amounts shown for calculated single-family and multi-family fees based on occupancy factors of 2.88 persons per dwelling unit and 2.63 persons per dwelling unit, respectively.</p>		

(Remainder of page intentionally left blank)

The following table summarizes the existing and calculated impact fees for non-residential development as follows:

Calculated Non-Residential Municipal Impact Fees			
Description	Development Unit	Existing Fee per Unit [1]	Calculated fee per Unit
Fee Type / Land Use:			
Police – All Uses	1,000 Square Feet	\$63.00	\$130.00
Fire – All Uses	1,000 Square Feet	123.00	700.00
General Governmental and Administrative – All Uses	1,000 Square Feet	N/A	160.00
Complete Streets:			
Retail and Eating / Drinking Places	1,000 Square Feet	\$4,826.00	\$576.00
Office and Other Services	1,000 Square Feet	1,530.00	187.00
Hotel / Motel	Per Room	N/A	80.00
Institutional / Daycare / Church (with Weekday School)	1,000 Square Feet	2,416.00	162.00
Industrial / Warehousing	1,000 Square Feet	449.00	33.00

[1] Existing Fees for Complete Streets shown above are based on the Restaurant (Type A) / Bars land use, the Hospital / Medical Office / Clinic / ALF land use, the Daycare land use, and the Storage / Warehouse / Flexspace land use.

As can be seen on the chart below, the total calculated single-family residential impact fees are slightly below the average of the fees charged by the other Florida communities surveyed.

CONCLUSIONS

The following is a summary of our findings and conclusions following our evaluation and analyses included in the preparation of this report:

1. The impact fees must be reasonably related to the cost of providing capital facilities and eligible equipment needed to accommodate new growth. The impact fees collected must be used by the City to pay for the capital costs related to serving new development.
2. The City should provide notice no less than 90 days before the effective date of new impact fee to accommodate in-progress development.
3. Collection of the fee may not be required before the issuance of the building permit.
4. It is recommended based on industry best practices that revenues be accounted for in restricted fund to align with capital planning objectives related to the use of impact fees collected. Therefore, impact fee revenues should be set aside in a separate account, and separate accounting must be made for those funds to ensure that they are used only for the purposes described above.
5. The fees developed within this report reflect recovery of identified costs and the City has discretion to phase-in or otherwise adopt less than the fully calculated fees. However, the adoption of fees less than the fully calculated rates should be applied between residential and non-residential properties equally in order to maintain the calculations herein in correct proportion. Adopting less than the calculated rates would increase the reliance on other fund and other revenue sources to meet the demands of growth.
6. The City should re-evaluate the impact fees in four years to keep up with capital facility related cost increases and service demands within the City.

The subsequent sections of this report provide detailed discussions on the assumptions and methodology used in the development of the calculated impact fees for the various municipal services.

(Remainder of page intentionally left blank)

Section 1 – Introduction

INTRODUCTION

The City of Deltona (previously defined as the “City”) is located north of Lake Monroe in the southwest portion of Volusia County. Based on Census reports and growth projections provided by City staff, the permanent population of the City for 2025 is estimated at approximately 98,792 residents. Based on information provided by the City, information obtained from the University of Florida’s Housing Data Clearinghouse, current permitting activity, development plans, and recent trends the City’s population in 2050 is expected to grow to approximately 115,000 permanent residents. The City currently provides the following municipal services, among others, to its residents: 1) police; 2) fire; 3) parks and recreation; 4) general and administrative services; and 5) transportation services.

The City has been experiencing growth over the past several years, both in terms of permanent population and non-residential development, which is placing a significant demand for additional capital facilities to provide the aforementioned municipal services. Therefore, the City authorized Raftelis to review and update its municipal impact fees for the City Commission’s consideration.

AUTHORIZATION

Raftelis was authorized by the City to develop municipal impact fees pursuant to an agreement between the City and Raftelis. The scope of work for this project, as defined in the agreement, was to:

1. Review and analyze the capital requirements of the City that are identified to meet the current level of service standards for the various municipal service’s function. This analysis includes a review of: i) the existing and future facility and equipment inventory of the various departments; ii) service area population and development demographics and future growth; and iii) fee application methodology.
2. Update the fees to be charged to new development in order to recover the growth-related capital costs associated with providing police, fire, parks and recreation, general and administrative, and transportation services. This analysis includes the apportionment of costs among customer / development classifications, and the development of the fee.
3. Develop a comparison of residential municipal impact fees and associated billing attributes with similar charges imposed by other neighboring jurisdictions.
4. Prepare a report that documents our analyses, assumptions, findings, and recommendations for consideration by the City Commission.

CRITERIA FOR IMPACT FEES

The purpose of an impact fee is to assign, to the extent practical, growth-related capital costs to those new customers that benefit from the facilities funded by such expenditures. To the extent new population growth and associated development imposes identifiable capital costs to municipal services, equity and modern capital funding practices suggest the assignment of such costs to those new residents or system users responsible for

such costs rather than the existing population base. Generally, this practice has been labeled as “growth paying its own way” to avoid overburdening existing users/residents with the cost of expansion.

Generally, for municipal impact fees industry best practices relate to the following issues:

1. The impact fees should be based on the cost of facilities necessitated by growth, and when collected, these fees should be spent on those same growth-related facilities and equipment that were identified as the basis for the fees;
2. The system of fees and charges should be set up so that there is not an intentional windfall to existing users of municipal services;
3. The impact fee should, to the extent practical, only cover the capital cost of construction and related costs thereto (engineering, legal, financing, administrative, etc.) for increases in or expansions of capacity or capital requirements for major facilities or equipment, such as fire stations and fire vehicles, which are required due to growth. Expenses due to normal renewal and replacement of a facility or major equipment should be borne by all users of the facility or district. Similarly, increased expenses due to operation and maintenance of that facility should be borne by all users of the facility;
4. Industry best practices suggest that revenues be accounted for in a restricted fund to align with capital planning objectives related to the use of impact fees collected. Therefore, impact fee revenues should be set aside in a separate account, and separate accounting must be made for those funds to ensure that they are used only for the purposes described above; and
5. Providing a grace period of 90 days from the time of adoption prior to the effective date of new fees to accommodate in-progress development.

Based on the criteria provided above, the impact fees herein will: i) include specific costs of improvements associated with the capacities needed to serve new growth; ii) not reflect costs of improvements associated with the renewal and replacement (R&R) of existing capital assets or deficiencies in level of service attributed to existing development; and iii) not include any costs of operation and maintenance of the capital improvements and major equipment.

This section provides only a general background regarding impact fees. Certain circumstances and issues regarding the interpretation of specific statutes or case law should be addressed by qualified legal counsel.

IMPACT FEE METHODS

There are different methods for the calculation of an impact fee. The calculation is dependent on the type of fee being calculated (e.g., police, recreational services, transportation, etc.), cost and engineering data available, and the availability of other local data such as household and population projections, current levels of service, and other related items. The calculated fees reflected in this report are based on a combination of two of these methods. These two methods were: 1) the improvements-driven method; and 2) the buy-in or recoupment approach. Both of these methods have been utilized in the development of impact fees for local governments throughout Florida.

The improvements-driven method is an approach that utilizes a specific list of existing or planned capital improvements over a period of time. For example, the fee may correspond to the level of capital improvements that have been identified in the capital improvements element of the Comprehensive Plan or capital improvement budget of the entity. The buy-in or recoupment method is based on the historical cost of assets, and adjustments to the basis of these assets, currently in service and with surplus capacity available to serve new growth.

The calculated impact fees herein for the municipal services evaluated by Raftelis include the application of these methods based on the cost of capital facilities required to provide such services and meet the City's service level standards. For municipal services, these level of service ("LOS") standards can vary by community as each municipality establishes its unique vision for the quality of life and service standards. A more complete discussion of the methods used for the development of the impact fees are presented in Sections 3, 4, 5, 6, and 7.

SUMMARY OF REPORT

In addition to Section 1, this report has been subdivided into six other sections. The following is a brief discussion of the remaining sections included in this report.

- Section 2– City Demographics. This section of the report provides a general discussion of the residential and proposed non-residential land use characteristics. Also presented in this section is a discussion on the residential occupancy and functional population methodologies used to develop the residential and non-residential weighting factors as well as the forecast of the residential population and dwelling units that are necessary in the design of the impact fees for the municipal services.
- Section 3– Police Impact Fee Analysis. This section discusses the development of the police impact fee, including the capital costs associated with providing police facilities, the methodology for the determination of the calculated fees, assumptions utilized in the design of the fees, and other factors associated with the fee determination.
- Section 4– Fire Impact Fee Analysis. This section discusses the development of the fire / rescue services impact fee, including the capital costs associated with providing fire facilities, the methodology for the determination of the calculated fees, assumptions utilized in the design of the fees, and other factors associated with the fee determination.
- Section 5– Parks and Recreation Impact Fee Analysis. This section discusses the development of the parks and recreation impact fee, including the capital costs associated with providing recreational facilities, the methodology for the determination of the calculated fees, assumptions utilized in the design of the fees, and other factors associated with the fee determination.
- Section 6– General and Administrative Services Impact Fee Analysis. This section discusses the development of the general and administrative services impact fee, including the capital costs associated with providing general/administrative capital facilities, the methodology for the determination of the calculated fees, assumptions utilized in the design of the fees, and other factors associated with the fee determination.

Section 7– Complete Streets Impact Fee Analysis. This section discusses the development of the complete streets impact fee, including the costs associated with providing capital facilities, the methodology for the determination of the calculated fees, assumptions utilized in the design of the fees, and other factors associated with the fee determination.

(Remainder of page intentionally left blank)

Section 2 – City Demographics

GENERAL

This section provides a general discussion of the current service area, including population and housing statistics and other demographic information related to land use. Additionally, a discussion of the anticipated growth in population and associated growth in residential dwelling units and developed non-residential square footage is also contained in this section along with a discussion on the method used to develop the non-residential land use factors.

POPULATION AND DEVELOPMENT FORECAST

A forecast of the City’s population is used to: i) have an appropriate planning horizon to ensure that capital costs are apportioned over a suitable growth segment; ii) link LOS requirements to the capital facility plan; and iii) identify any deficiencies in existing capital facilities related to the LOS standards and current population served.

As shown in Table 2-1 at the end of this section, the City’s total estimated permanent population is projected to be approximately 98,792 by the end of 2025. Based on information provided by the City, it is estimated that the total permanent population will approach approximately 114,754 residents by the year 2050. The future population growth anticipated by the City reflects an overall annual average growth rate that is projected to be approximately 0.60% per year through 2050.

Historical and Projected Population, Dwelling Units, and Non-Residential Developed Square Footage [1]					
Year	Annual Average Total Population Growth Rate [2]	Total Permanent Population	Total Annual Residential Dwelling Units	Developed Non-residential Square Footage Growth Rate [2]	Developed Non-residential Square Footage
2025	N/A	98,792	34,431	N/A	6,107,010
2030	1.05%	104,094	36,279	5.32%	7,915,157
2035	1.00%	109,397	38,127	4.76%	9,723,304
2040	0.42%	111,693	38,928	2.00%	10,735,313
2045	0.31%	113,432	39,533	1.00%	11,282,922
2050	0.23%	114,754	39,994	0.50%	11,567,830

[1] Future population and square footage estimates shown based on a review of historical population growth as obtained from the U.S. Census Bureau, the Florida Housing Data Clearinghouse, and information and discussions with City staff.

[2] Growth rate for 2025-2035 based on recent development information provided by the and the growth rate for 2035 and beyond based on projections from the Florida Housing Data Clearinghouse.

To the extent the projection of future development materially changes, it may be appropriate for the City to re-evaluate the impact fees developed in this report.

(Remainder of page intentionally left blank)

DEVELOPMENT OF RESIDENTIAL OCCUPANCY FACTORS

The City currently charges residential impact fees based on the size and land use depending on the fee type. During the course of the study, the City directed Raftelis to develop a residential application methodology based on unit type / land use. In order to develop this approach an analysis of residential occupancy factors (i.e., persons per dwelling unit) by residential unit type was conducted. This analysis utilized data from the American Community 5 Year Survey Data from 2023, as obtained from the US Census Bureau.

Based on this analysis a fee structure was developed along with the corresponding residential persons per unit occupancy factors. These occupancy factors are summarized below.

Residential Occupancy Factors by Dwelling Unit / Land Use Type	
Description	Estimated Persons per Unit (PPU)
Single-family	2.88
Multi-family	2.63

FUNCTIONAL POPULATION ALLOCATION

In order to develop non-residential impact fees by land use, the capital costs need to be apportioned between non-residential properties. The apportionment is accomplished through a functional population allocation method.

The use of functional population^[1] to develop more equitable impact fees has widely been used in Florida since the 1980s and remains a vital tool in estimating service demands between customer classes. Specifically, this methodology is applied to apportion capital costs associated with complete streets allocable to the non-residential land uses.

The concept of functional population is incorporated in order to spread capital costs more equitably among non-residential land-uses. Businesses place demands upon public services in a similar manner as residents do, and it is equitable to spread these costs based on the average number of people estimated to be present. For residential use, the allocation is calculated per resident based on the average amount of time spent at the residence. The resident's remaining time is then allocated as either an employee and/or visitor to the remaining non-residential classes as determined using traffic generation studies, estimated employment data, and anticipated operations. The net result is the total number of person hours per residential versus non-residential location.

Table 2-2 provides the details used to estimate the functional population coefficients. Generally, the following results were observed:

- Residential costs are based on the average amount of time spent at home or approximately 86% for each citizen on average.

[1] Nicholas, Nelson, and Juergensmeyer, A Practitioner's Guide to Development Impact Fees, American Planning Association, 1991.

- Non-residential costs are based on the remaining time (14%) that each citizen serves as a visitor or employee within the community.

Regarding non-residential land uses, based on discussions with the City, five main land use categories were developed for the purpose of applying the impact fees to new non-residential development for the complete streets impact fee while a uniform approach was maintained for police, fire, and the new general government and administrative impact fee. These five consolidated categories were developed to more reasonably differentiate between the non-residential land uses and their demands for complete streets while also not creating an undue administrative burden on the City. The main categories are listed below with a brief description of typical land uses that would fall within each category based on the City's land use matrix.

- Retail and Eating/Drinking Places – Restaurants, new and used merchandise stores, grocery stores, hardware stores, convenience stores, clothing stores, electronics and appliance stores, gas stations, automotive part stores, specialty food stores, car washes, bars and night clubs, etc.
- Office and Other Services – Business or professional offices, call centers, bank and financial offices, counseling offices, medical or dental offices, real estate businesses, investigative services, call centers, etc.
- Institutional / Daycare / Church (With Weekday School) – Churches, civic and fraternal clubs, museums, art campuses, colleges, seminaries, universities, industrial and trade schools, primary and secondary schools, daycares, professional and technical schools, hospitals, etc.
- Industrial / Warehousing – Food processing facilities, commercial bakeries, medical equipment and supply, plastic products, rubber products, textile products, metal fabricated products, wood products, pharmaceutical and medicine products, storage facilities, warehousing, wholesale trade, etc.
- Hotel / Motel – Places of lodging including hotels and motels of various sizes, amenities, and offerings.

It should be noted that the list of examples below is not exhaustive and that some properties may be of mixed use in their nature.

The functional population results were used to develop the complete streets capital facilities impact fees provided for in Section 7 of this report.

Workers Not Carpooled	69,451
Total Vehicles	73,656
Estimated Workers per Vehicle	1.06

Section 3 – Police Impact Fee Analysis

GENERAL

This section provides a discussion of the development and design of the calculated impact fee for police capital facilities and equipment. Included in this section is a discussion of the City’s existing level of service (“LOS”) standards, capital costs included as the basis for the fee determination, and the design of the fee to be applied to new growth within the City.

LEVEL OF SERVICE STANDARDS

The City’s police service is provided by the Volusia County Sheriff’s Department on a contract basis. Based on information provided by the City, there currently are 86 Full-Time Equivalent (“FTE”) sworn officer positions and three civilian and administrative positions associated with this service. The City anticipates adding an additional 14 sworn positions through this agreement in the near future. These positions are funded to serve a total current estimated permanent population of approximately 99,000 persons as shown in Table 2-1. The current level of service being funded is approximately 1.0 full-time sworn officers per 1,000 population served. While the City’s police service is provided by Volusia County the City does provide for the capital facilities (public safety building) that the Sheriff’s department uses in providing the City police services.

EXISTING POLICE ASSETS

In the development of the fee, the original costs of the existing assets were considered. The City’s existing assets are categorized by major type and are summarized below.

Inventory of City Police Assets [1]		
Description	Total Costs	Included Costs
Machinery and Equipment	\$297,568	\$0
Other Capital Equipment and Facilities	<u>1,488,034</u>	<u>1,488,034</u>
Total	<u>\$1,785,602</u>	<u>\$1,488,034</u>

[1] Amounts as shown on Table 3-2 and 3-5.

As shown above, of the \$1,785,602 in police assets, \$1,488,034 associated with facilities was considered includable in the calculation of the impact fee.

CAPITAL IMPROVEMENT PLAN

In the development of the calculated fee, the following expansion-related capital improvement expenditures were provided by the City. Along with the City’s existing investment in police assets, these capital requirements are anticipated and designed to maintain the department’s ability to provide service to the City’s future population level and maintain the identified level of service standards. The City’s future capital requirements are summarized below.

Projected Future City Investment in Police Assets (Capital Plan) [1]	
Description	Amount
Other Major Capital Equipment and Facilities	\$30,130,000
Replacement Adjustments	(24,639,819)
Net Future City Investments in Police Assets	<u>\$5,490,181</u>

[1] Amounts as provided by City staff and are shown on Table 3-3 and 3-5.

As can be seen above, the City anticipates spending \$30,130,000 in order to further develop the police assets and facilities to provide the desired level of service to the City as it grows. The net amount recognized in the calculation of the fee after excluding renewal and replacement projects and grant funded projects was \$5,490,181.

DEVELOPMENT OF CAPITAL COSTS INCLUDED IN THE FEE

In the development of the police services impact fee, the original costs of the existing facilities as well as the proposed future capital improvement requirements we considered. These historical and projected costs were then analyzed to develop an estimate of the capital facility costs associated with each new officer. The facility costs utilized in the analysis were based on the existing facilities currently in service along with the planned new substation. These existing and projected facility costs, when allocated over the current and planned future officers projected for 2050 of 110 officers, are estimated at \$63,438 per officer.

Existing and Future Capital Cost per Officer [1]	
Description	Cost per Officer
Existing Facility Costs [2]	\$13,528
Planned Future Facility Costs [3]	49,911
Total Cost per Officer	<u>\$63,438</u>

[1] Amounts as shown as summarized on Table 3-5 and may not add due to rounding.
 [2] Amount shown based existing assets as summarized on Table 3-2.
 [3] Amount shown based CIP projects as summarized in Table 3-3.

DESIGN OF POLICE IMPACT FEE

The method used to determine the police services impact fee is a combination of the improvements-driven method and buy-in method as the recoupment of a portion of existing investments availability to serve new growth and the costs associated with adding additional capacity to service the City’s future needs are recognized. This method was based upon a three-step process. Table 3-6 helps to illustrate the results of the approach. The following is a brief description of the method used in this study.

- Development of Total Capital Need – Based on the previously noted includable portion of existing investment in the department plus the includable portion of the multi-year capital plan the total investment in police department capital facilities was developed. This amount then allocated based on the level of officers served by those assets is approximately \$63,438 per officer. In order to maintain the existing level of service the City is projected to need a total of 106 officers by 2035. The total includable

investment on a per officer basis of approximately \$63,438 applied to these projected 106 officers comes to a total projected investment of \$6,724,462. This amount is the total allocated capital cost to serve the projected population growth.

- Allocation of Capital Costs to Customer Classes – This step allocates the total capital costs between the residential and non-residential classes based on a weighted allocation that considers the department’s response call data for those major service categories, inflow and outflow of commuters in the City, as obtained from the 2023 Census “OnTheMap,” as well as the City’s total developed square footage by land use class. These three criteria are evenly weighted in the allocation. While the call data directly relates to the demand for service, using square footage allows those land use categories that may not have calls during the surveyed call period to still receive a share of cost due to the benefit the department provides to their properties for overall crime prevention. Additionally, the commuter inflow / outflow relates to the amount of time residents live and work either inside or outside the City limits and the nonresidents who work within the City. The classes with higher service calls, square footage, and person time receive a higher allocation of cost.
- Calculation of Cost per Equivalent Impact Fee Unit – Once the allocated costs are identified per land-use, they are summarized and presented as an equivalent unit basis; per dwelling unit and per 1,000 square feet. Table 3-7 provides a detailed listing of the calculated impact fees by class.

Police Capital Facilities Impact Fee Assumptions

The development of the police services impact fees required several assumptions. The major assumptions used in the development of the calculated impact fees are as follows:

1. In the development of the capital costs to serve growth, the total existing and projected capital costs of providing police services were developed as described previously based on existing asset records and proposed capital expenditures through 2030. The total estimated existing and projected investment through 2030 of \$6.7 million was the cost basis used in the development of the fees.
2. In the development of the capital costs, it was assumed that the existing level of service would be maintained by the City by the end of the forecast period. This level of service includes only the number of full-time patrol officers to serve the general population of the City. As previously mentioned, the level of service assumed in this study is 1.0 full-time patrol officers per 1,000 of population.
3. The \$6.7 million in total existing and projected investment was then allocated using the police department’s response call data for a multi-year window (2022-2024), the inflow / outflow data, as well as total developed square footage. The police department’s call data was approximately 66% residential and 34% non-residential, the inflow / outflow data was approximately 86% residential and 14% non-residential while the developed square footage data was approximately 90% residential and 10% non-residential. Each factor was weighted at 33.33% in the allocation. The weighed allocation of these factors resulted in an overall allocation of approximately 81% residential and 19% non-residential. This resulted in approximately \$5.4 million in total existing and projected investment being allocated to the residential class and the remaining \$1.3 million being allocated to the non-residential

class. These allocated costs were then divided by the projected 2035 population and non-residential square footage estimates from Table 2-1 to develop a cost on a per unit basis.

IMPACT FEE CALCULATION

Based on the above-referenced assumptions, the allocated capital facilities, and the population and square footage projections of the City, the police services impact fees for the residential and non-residential customer classifications were developed. As shown in Table 3-6 at the end of this section, the cost per equivalent impact fee unit by customer classification was estimated.

Description	Amount [1]	
Total Capital Cost per New Officer	\$63,438	
Total Officers Projected by 2035	106.00	
Total Capital Costs to be Recovered From Impact Fees	\$6,724,462	
Weighted Cost Allocation Factor (Residential / Non-residential)	80.8%	19.2%
Net Allocated Capital Cost	\$5,431,052	\$1,293,410
Total 2035 Residential Population / Non-residential Square Footage	109,397	9,723,304
Total Costs to be Recovered per Person / Square Foot	\$49.64	\$0.13

[1] Amounts as shown on Table 3-6.

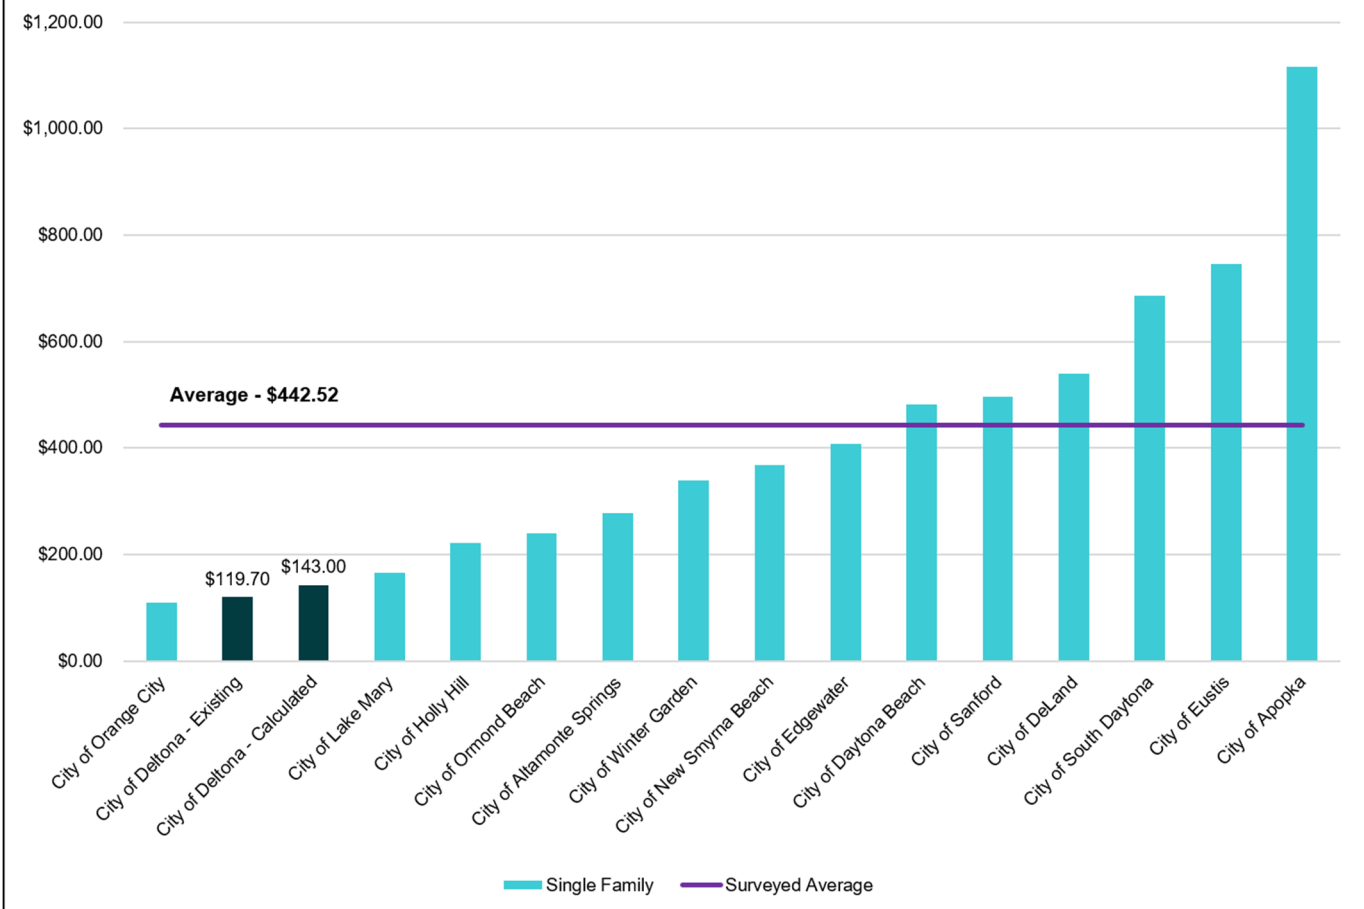

The following summarizes the existing and calculated police impact fees:

Existing and Calculated Police Impact Fees					
Description	Impact Fee Unit	Existing Fee per Unit	Calculated Fee per Unit	Difference – \$	Difference – %
<u>Residential:</u>					
Single-family @ 2.88 PPU	Dwelling Unit	\$119.70	\$143.00	\$23.30	19%
Multi-family @ 2.63 PPU	Dwelling Unit	94.50	130.00	35.50	38%
<u>Non-residential:</u>					
All Land Uses	Per 1,000 Sq. Ft.	\$63.00	\$130.00	\$67.00	106%

IMPACT FEE COMPARISONS

In order to provide the City with additional information about the calculated impact fees, a comparison of the calculated fees for the City and those charged by other jurisdictions was prepared. Table 3-7 at the end of this section summarizes the impact fees for police capital facilities charged by other communities with the calculated rates of the City. Please note that each community may establish a different LOS standard to meet its needs for police services and capital facilities and, as such, the City can anticipate variances between other communities.

Section 4 – Fire Impact Fee Analysis

GENERAL

This section provides a discussion of the development and design of the calculated impact fee for fire capital facilities and vehicles/apparatus. Included in this section is a discussion of the City’s level of service (“LOS”) standard, capital costs included as the basis for the fee determination, and the design of the fee to be applied to new growth within the City.

LEVEL OF SERVICE STANDARDS

The City currently maintains an Insurance Services Office (“ISO”) rating of 2/2× and currently staffs 90 full time fire personnel and 17 administrative support personnel. In addition to these fire personnel, the City is planning on adding additional fire rescue personnel to meet and maintain their level of service as the City grows over the next 10 years. The City For the purposes of our analysis the level of service will be based upon maintaining the City’s current ISO rating.

Each full-time firefighter requires a complement of personnel equipment, vehicles and other equipment, and base facilities, as follows:

Personnel Equipment:

- Each firefighter must be equipped with safety gear and other relevant personal equipment to perform his/her duties. A few of the basic issues include:
 1. Turnout coat, Turnout pants, firefighting gloves;
 2. Helmet and Nomex hood; and
 3. Portable radio.

It should be noted that while these types of assets are necessary to provide fire/rescue service, best industry practices limit the types of assets that can be included in the calculation of the impact fee to major equipment such as fire vehicles and, as such, short-lived minor equipment is not included in our fee calculations.

Vehicles and Other Equipment:

- The department maintains a fleet of fire trucks, rescue trucks, and administrative vehicles to provide fire/rescue services to the City. The City anticipates having to add additional firefighters through 2035 to keep pace with projected population growth while maintaining service levels. These vehicles include, but are not limited to, a new rescue trucks, incremental costs associated with the basis adjustment for a replacement ladder truck and fire engine, and new vehicles for fire inspectors. These vehicles’ needs have been included in the impact fee calculation, which will allow the City to accrue a portion of costs of new vehicles over time from new growth.

Base Facilities:

- The City plans on upgrading five of their existing fire stations and adding an additional station to help accommodate the growth occurring within the City during the forecast period.

As discussed above, the City has made existing investments in fire / rescue services and plans to make future improvements that will serve new growth.

EXISTING FIRE ASSETS

In the development of the fee, the original costs of the existing assets were considered. The City's existing assets are categorized by major type and are summarized below.

Inventory of City Fire / Rescue Assets [1]		
Description	Total Costs	Included Costs
Machinery and Equipment	\$2,531,627	\$0
Major Vehicles and Fire / Rescue Equipment	7,006,917	7,006,917
Major Facilities	7,527,070	7,527,070
Total	<u>\$17,065,614</u>	<u>\$14,533,987</u>

[1] Amounts as shown on Table 4-2.

As shown above, of the \$17,065,614 in fire / rescue assets, \$14,533,987 was includable in the calculation of the impact fee as the industry best practices limit the inclusion of short-lived capital equipment in fee calculations.

CAPITAL IMPROVEMENT PLAN

In the development of the calculated fee, the following expansion-related capital improvement expenditures were provided by the City. Along with the City's existing investment in fire / rescue assets, these capital requirements are anticipated and designed to maintain the department's ability to provide service to the City's future population level and fulfill the identified level of service standards. The City's future capital requirements are categorized by type of expenditure and are summarized below.

Projected Future City Investment in Fire / Rescue Assets (Capital Plan) [1]	
Description	Amounts
Machinery and Equipment	\$580,600
Major Vehicles and Fire / Rescue Equipment	9,812,000
Major Facilities	83,266,000
Subtotal	<u>\$93,658,600</u>
Replacement Adjustments	(57,049,483)
Equipment Related Adjustments	(580,600)
Net Future City Investments in Fire / Rescue Assets	<u>\$36,028,503</u>

[1] Amounts as provided by City staff and are shown on Table 4-3 and 4-5.

As can be seen above, the City anticipates spending \$93,658,600 in order to further develop the fire / rescue assets and facilities to maintain its existing level of service to the City as it grows through 2030. The net amount recognized in the calculation of the fee was \$36,028,503.

DEVELOPMENT OF INCLUDABLE CAPITAL COSTS

In the development of the fee, the original costs of the existing assets were considered as well as the proposed future capital improvement requirements. These historical and projected costs were then analyzed to develop an estimate of the capital facility costs associated with each new firefighter. The major components would be the vehicle and related equipment and facility costs.

The vehicle cost estimates are based on the department’s existing vehicle inventory and the Capital Improvement Plan (“CIP”). These total vehicle costs associated with the hiring of an additional firefighter were estimated at \$88,791 per firefighter.

The facility costs utilized in the analysis were based on the department’s existing investment in stations and the CIP which includes upgrades/expansions to existing fire stations and a new station. These existing and projected facility costs, when allocated over the current and planned future fire personnel through 2035, are estimated at \$348,588 per firefighter.

Existing and Future Capital Cost per Firefighter [1]	
Description	Cost per Firefighter
Major Vehicles and Fire / Rescue Equipment [2]	\$88,791
Other Capital Equipment and Facilities [3]	348,588
Total Cost per Firefighter	\$437,380

[1] Amounts as shown as summarized on Table 4-5 and may not add due to rounding.
 [2] Amount shown based on existing and planned future vehicle costs provided on Tables 4-2 and 4-3.
 [3] Amount shown based on existing and planned future facility costs Tables 4-2 and 4-3.

DESIGN OF FIRE IMPACT FEE

The method used to determine the fire impact fee is a combination of the improvements-driven method and buy-in method as the recoupment of a portion of existing investments availability to serve new growth and the costs associated with adding additional capacity to service the City’s future needs are recognized. This method was based upon a three-step process. Table 4-6 helps to illustrate the results of the approach. The following is a brief description of the method used in this study.

- Development of Total Capital Need – Based on the previously noted existing investment in the department plus the includable portion of the multi-year capital plan the total investment in fire / rescue department capital facilities was developed. This amount then allocated based on the level of firefighters served by those assets is approximately \$437,380 per firefighter. In order to maintain the existing level of service the City is projected to need a total of 100 firefighters by 2030. The total includable investment on a per firefighter basis of \$437,380 applied to these projected 100 firefighters comes to a total projected

investment of \$43,737,973. This amount is the total allocated capital cost to serve the projected population growth.

- Allocation of Capital Costs to Customer Classes – This step allocates the total capital costs between the residential and non-residential classes based on a weighted allocation that considers both the department’s response call data for those major service categories, inflow and outflow of commuters in the City, as obtained from the 2023 Census “OnTheMap,” as well as the City’s total developed square footage by land use class. These three criteria are evenly weighted in the allocation. While the call data directly relates to the demand for service, using square footage allows those land use categories that may not have calls during the surveyed call period to still receive a share of cost due to the benefit the department provides to their properties for overall fire / rescue services. Additionally, the commuter inflow / outflow relates to the amount of time residents live and work either inside or outside the City limits and the nonresidents who work within the City. The classes with higher service calls, square footage, and person time receive a higher allocation of cost.
- Calculation of Cost per Equivalent Impact Fee Unit – Once the allocated costs are identified per land-use, they are summarized and presented as an equivalent unit basis; per dwelling unit and per 1,000 square feet. Table 4-6 provides a detailed listing of the calculated impact fees and their appropriate land-use and measures.

Fire Impact Fee Assumptions

The development of the fire impact fees required several assumptions. The major assumptions used in the development of the calculated impact fees are as follows:

1. In the development of the capital costs to serve growth, the total existing and projected capital costs of providing fire services were developed as described previously based on existing asset records and proposed capital expenditures through 2030. The total existing and projected investment of \$43.7 million was the cost basis used in the development of the fees.
2. In the development of the capital costs, it was assumed that the existing level of service would be maintained by the City by the end of the forecast period. This level of service is based on maintaining the department’s current ISO rating of 2/2X over the forecast period.
3. The \$48.1 million in total existing and projected investment was then allocated using the Fire Department’s response call data, the inflow / outflow data, as well as total developed square footage. The Fire Department’s call data was approximately 81% residential and 19% non-residential, the inflow / outflow data was approximately 86% residential and 14% non-residential while the developed square footage data was approximately 90% residential and 10% non-residential. Each factor was weighted at 33.33% in the allocation. The weighed allocation of these factors resulted in an overall allocation of approximately 86% residential and 14% non-residential. This resulted in approximately \$41.3 million in total existing and projected investment being allocated to the residential class and the remaining \$6.9 million being allocated to the non-residential class. These allocated costs were then divided by the projected 2035 population and non-residential developed square footage estimates from Table 2-1 to develop a cost on a per unit basis.

IMPACT FEE CALCULATION

Based on the above-referenced assumptions, the allocated capital facilities, and the population and land use projections of the City, the fire services impact fees for the residential and non-residential customer classifications were developed. As shown in Table 4-6 at the end of this section, the cost per equivalent impact fee unit by customer classification was estimated.

Description	Amount [1]	
Total Capital Cost per New Firefighter	\$437,380	
Total Firefighters Projected by 2035	110.00	
Total Capital Costs to be Recovered From Impact Fees	\$48,111,771	
Weighted Cost Allocation Factor (Residential / Non-residential)	85.8%	14.2%
Net Allocated Capital Cost	\$41,257,472	\$6,854,298
Total 2035 Residential Population / Non-residential Square Footage	109,397	9,723,304
Total Costs to be Recovered per Person / Square Foot	\$377.13	\$0.70

[1] Amounts as shown on Table 4-6.

The following summarizes the existing and calculated fire impact fees:

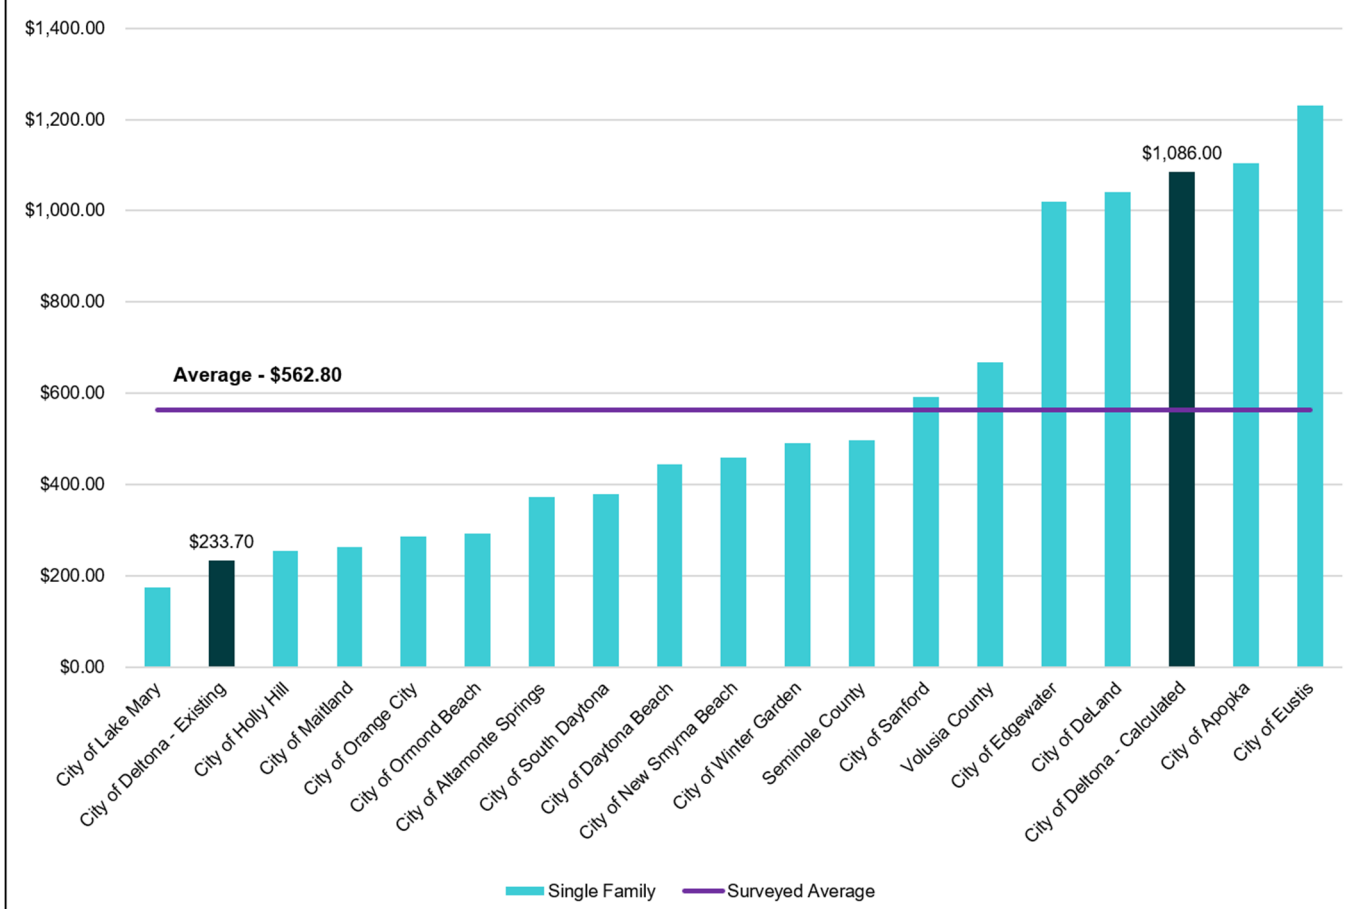

Existing and Calculated Fire Impact Fees					
Description	Impact Fee Unit	Existing Fee per Unit	Calculated Fee per Unit	Difference – \$	Difference – %
<u>Residential:</u>					
Single-family @ 2.88 PPU	Dwelling Unit	\$233.70	\$1,086.00	\$852.30	365%
Multi-family @2.63 PPU	Dwelling Unit	184.50	991.00	806.50	437%
<u>Non-residential:</u>					
All Land Uses	Per 1,000 Sq. Ft.	\$123.00	\$700.00	\$577.00	469%

IMPACT FEE COMPARISONS

In order to provide the City with additional information about the calculated impact fees, a comparison of the calculated fees for the City and those charged by other jurisdictions was prepared. Table 4-7 at the end of this section summarizes the impact fees for fire capital facilities charged by other communities with the calculated rates of the City. Please note that each community may establish a different LOS standard to meet its demographic needs for fire services and capital facilities and, as such, the City can anticipate variances between other communities.

16	Seminole County	[3]	497.00	497.00	\$0.01300- \$3.15600 per sq. ft.
17	City of South Daytona		378.45	321.33	\$0.22000- \$2.63000 per sq. ft.
18	Volusia County	[3][5]	666.78	625.67	\$0.02000- \$3.84000 per sq. ft.
19	City of Winter Garden		491.00	491.00	\$0.85000 per sq. ft.
20	Other Florida Governmental Agencies' Average		\$562.81	\$484.12	

Footnotes:

- [1] Unless otherwise noted, amounts shown reflect impact fees in effect as of January 2026. This comparison is intended to show comparable charges for similar service for comparison purposes only and is not intended to be a complete listing of all rates and charges offered by each listed municipality.
- [2] Reflects the lowest and highest rate per square feet.
- [3] Municipality charges the residential fee based on square footage. For the purpose of comparison, the fees shown are based on the average home size in the City of Deltona: 1,900 sq. ft. for single family and 1,500 sq. ft. for multi-family.
- [4] The City of Altamonte Springs charges two separate impact fees based on if the building has fire sprinklers. Fee shown is for a unit with fire sprinkler protection.
- [5] Volusia County charges impact fees for fire and EMS separately. Amounts shown include both impact fees.

Section 5 – Parks and Recreation Impact Fee Analysis

GENERAL

This section provides a discussion of the development and design of the calculated impact fee for Parks and Recreation services. Included in this section is a discussion of the City’s adopted level of service (“LOS”) standards, and related capital costs included as the basis for the fee determination, and the design of the fee to be applied to new growth within the City.

LEVEL OF SERVICE STANDARDS

As outlined in the City’s Comprehensive Plan and Parks System Master Plan, the City has adopted LOS standards for recreational facilities and activities. With respect to developed and undeveloped open space, the City has adopted a minimum recreational LOS standard of four and a half acres per 1,000 residents. The City currently owns and maintains an inventory of parks and providing for over 704 acres of open space. A summary of the City-owned and -operated parks (existing and under development) is summarized on Table 5-1. Currently the City’s level of service requirement on open space would require the City to have approximately 445 acres of total open space. The City’s current inventory includes 704 acres including neighborhood parks, community centers, and more. This is a current surplus of 260 acres based on the 2025 estimated population as shown on Table 5-2. This surplus is projected to continue through 2050 based on current population projections as shown on Table 5-3. The current surplus in terms of the acres the City owns compared to the level of service requirement for acres is shown below as follows:

Description	Amounts
Estimated Total Population 2025	98,792
Existing Level Of Service	4.5 Acres per 1,000 Population
Required Acres	444.56 Acres
Current City Inventory	704.77 Acres
Surplus Acres	260.21

It should also be noted that the City is projected to continue to add to, enhance, and develop new recreational facilities and amenities related to the existing park lands to serve new growth.

(Remainder of page intentionally left blank)

CAPITAL IMPROVEMENT PLAN

In the determination of the fee, the following multi-year capital improvement plan was provided by the City for use in this project. The City’s major capital requirements included in the impact fee calculation are summarized below.

Projected Future City Investment in Recreation Assets (Capital Plan) [1]	
Description	Amount
Total Capital Projects	\$21,640,220
Grant Funded Projects, Renewal and Replacement Projects, and Equipment Related Adjustments	(10,682,953)
Net Future City Investments in Recreation Assets	<u>\$10,957,267</u>

[1] Amounts as provided by City staff and are shown on Table 5-4.

As can be seen above, the City estimates spending \$10,957,267 on impact fee eligible projects in order to further develop the existing park lands as the City continues to grow.

DESIGN OF PARKS AND RECREATION IMPACT FEE

The method used to calculate the impact fee is based on the improvements-driven method as only net costs associated with adding additional facilities to serve the City’s future recreation capacity needs are recognized. Table 5-5 at the end of this report summarizes the results of the impact fee calculation. The following is a brief description of the method used in this study:

- Development of Total Capital Need – Based on the City’s estimated capital costs of developing future park facilities, and the dwelling unit projections, the total estimated cost to serve future residents is developed.
- Development of Estimated Population Served – This data was calculated from Table 2-1 to establish a total amount of permanent population that would be served by the recreation assets of the City.
- Calculation of Cost per Dwelling Unit – Once the total capital costs allocable to future residents are estimated, the impact fee unit per person is calculated for residential units. This calculation includes an estimated person per dwelling unit for both a single-family resident and multi-family units based on the occupancy analysis detailed previously.

Parks and Recreation Facilities Impact Fee Assumptions

In the development of the recreation impact fees, several assumptions were utilized. The major assumptions used in the development of the impact fees are as follows:

1. The development of the cost for the recreation facilities impact fees was based on the City’s the level of service standards for recreational facilities and the City’s estimated capital costs to develop future facilities and activities.

2. As indicated in Table 5-4, the City has identified planned future growth related net capital needs totaling \$10,957,267. The total needs were based on planned future investments to be made by the City, which should be recovered from future residential growth.
3. No credits from other revenue sources have been identified for the purposes of this calculation, as it is assumed that other funding sources generated by future users will be utilized to provide for the necessary ongoing operating and repair / replacement costs required.

Impact Fee Calculation

Based on the above-referenced assumptions, the recreation impact fee as calculated in detail on Table 5-5 was developed as follows:

Description	Amounts
Future Planned Net Investment in Parks and Recreation Through 2031	\$10,957,267
Change in Projected Population from 2025 to 2050 (Rounded)	15,962
Total Costs to be Recovered per Person	\$686.48
Total Costs to be Recovered per Person (Rounded)	\$686.00
Single-family Persons per Dwelling Unit	2.88
Rounded Single-family Cost per Dwelling Unit	\$1,976.00
Multi-family Persons per Dwelling Unit	2.63
Rounded Multi-family Cost per Dwelling Unit	\$1,804.00

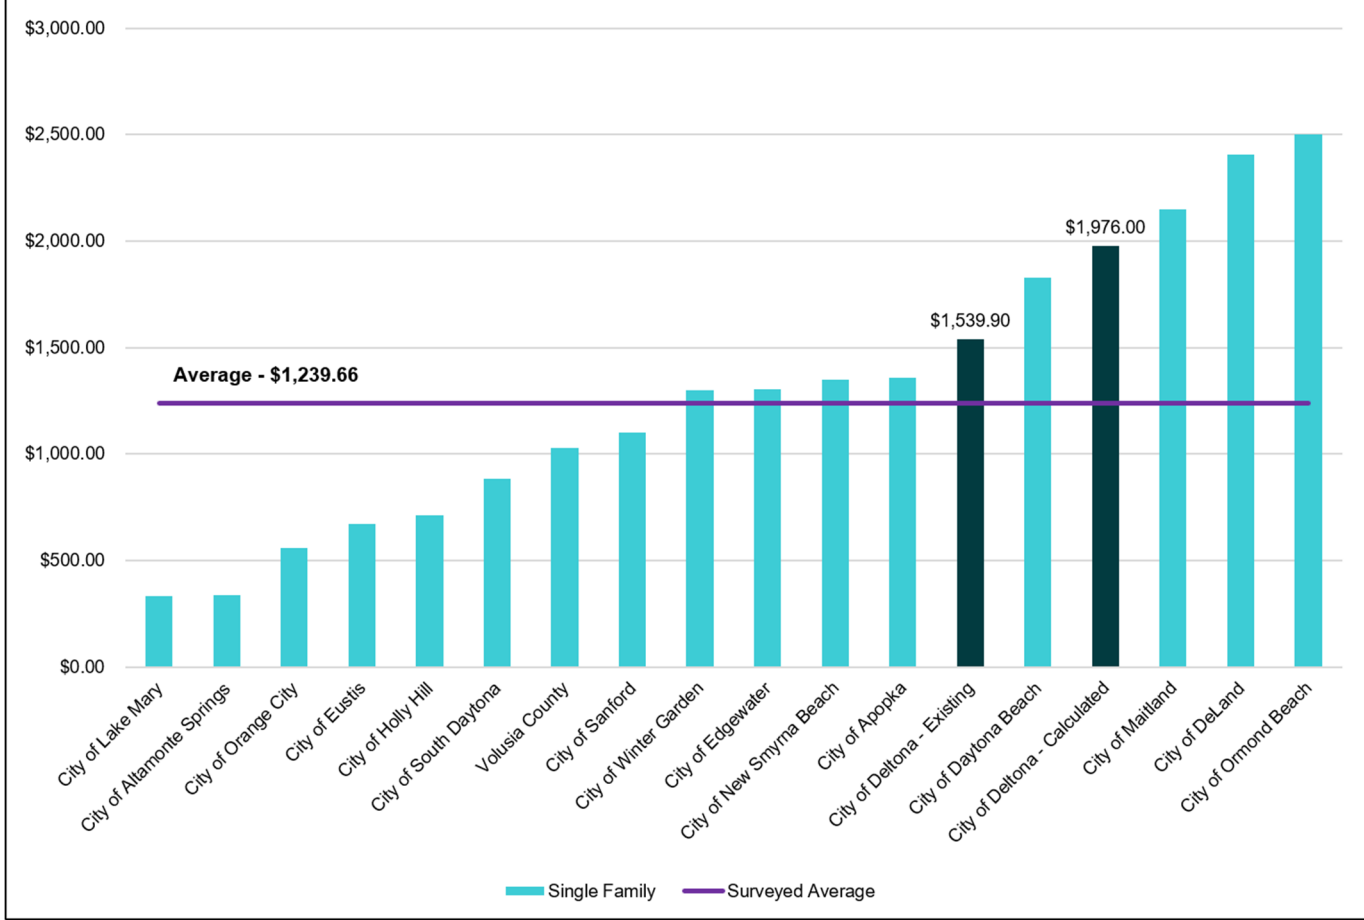

The following summarizes the existing and calculated parks and recreation impact fee:

Calculated Parks and Recreation Services Impact Fees					
Description	Impact Fee Unit	Existing Fee per Unit	Calculated Fee per Unit	Difference – \$	Difference – %
Single-family	Dwelling Unit	\$1,539.90	\$1,976.00	\$436.10	28%
Multi-family	Dwelling Unit	\$830.50	\$1,804.00	\$973.5	117%

IMPACT FEE COMPARISONS

In order to provide the City with additional information about the calculated impact fees, a comparison of the calculated fees for the City and those charged by other jurisdictions was prepared. Table 5-6 at the end of this section summarizes the impact fees for recreational services charged by other communities with the calculated rates of the City. Please note that each community may establish a different LOS standard to meet its specific goals for recreation facilities and activities and, as such, the City can anticipate variances between other communities.

Footnotes:

- [1] Unless otherwise noted, amounts shown reflect impact fees in effect as of January 2026. This comparison is intended to show comparable charges for similar service for comparison purposes only and is not intended to be a complete listing of all rates and charges offered by each listed municipality.
- [2] Municipality charges the residential fee based on square footage. For the purpose of comparison, the fees shown are based on the average home size in the City of Deltona: 2,000 sq. ft. for single family and 1,200 sq. ft. for multi-family.
- [3] City of Edgewater has a 3 year phase-in plan to increase fees to \$898.00 for single family and \$642.00 for multifamily by 2028.
- [4] City of Lake Mary charges nonresidential properties a fee of \$0.031 per sq ft.
- [5] Volusia County charges two separate parks and recreation impact fees for local parks and district/coastal parks. Amounts shown include both fees.

Section 6 – General Government and Administrative Impact Fee Analysis

GENERAL

This section provides a discussion of the development and design of a new general government and administrative services impact fee as the City currently does not charge an impact fee for these types of capital facilities. Included in this section is a discussion of current facilities, capital costs, included as the basis for the determination of the fee, and the design of the fee to be applied to new growth within the City.

EXISTING GENERAL GOVERNMENT AND ADMINISTRATIVE SERVICES ASSETS

In the development of the fee, the original costs of the existing assets for City Hall and Public Works were considered. An adjustment was made to exclude a portion of the City Hall related facilities that are associated with utility services based on square footage allocations provided by the City. The City’s existing assets are categorized by major type and are summarized below.

Inventory of City General Government and Administrative Services Assets [1]			
Description	Original Cost	Allocation to Existing Units	Allocable Amount
Equipment	\$21,655,559	0.0%	\$0
Vehicles	2,361,981	0.0%	0
Facilities – City Hall	8,201,346	80.2%	6,578,220
Facilities – Public Works	6,836,976	100.0%	6,836,976
Other Facilities	155,749,778	0.0%	0
Net Recoverable Costs	<u>\$194,805,640</u>		<u>\$13,415,196</u>

[1] Amounts as shown on Table 6-1.

As shown above, the total allocable net investment of \$13,415,196 associated with City Hall and Public Works is included in the calculation of the impact fees.

CAPITAL IMPROVEMENT PLAN

In the development of the calculated fee, the following capital improvement requirements were provided by the City. Along with the City’s existing investment in general government and administrative assets, these capital requirements are anticipated and designed to maintain the City’s ability to provide these services to the City’s existing and future population levels. The City’s capital requirements are categorized by type of expenditure and are summarized on the following page.

(Remainder of page intentionally left blank)

Projected Future City Investment in General and Administrative Services [1]	
Description	Amount
Total Future Planned Investment in Assets	\$2,860,022
Equipment, R&R, and Vehicle Related Project Adjustments	(2,513,356)
Net Future Investment in City Assets	\$346,666

[1] Amounts as provided by City staff and are shown on Table 6-2.

As can be seen above, the City anticipates spending approximately \$2.9 million in planned future projects. Approximately \$2.5 million of these projects were associated with purchases of equipment, furniture, vehicles, or renovations and replacement type projects. The net amount recognized in the calculation of the fee was after accounting for removal of the equipment, vehicle, and renovation related projects as well as basis adjustments associated with the City Hall A/C Chiller Replacement Project was \$346,666.

DESIGN OF GENERAL GOVERNMENT AND ADMINISTRATIVE SERVICES IMPACT FEE

The method used to calculate the general government and administrative services impact fee is a combination of the improvements-driven method and buy-in method as the recoupment of a portion of existing investments availability to serve new growth and the costs associated with adding additional capacity to service the City's future needs are recognized. Tables 6-3 and 6-4 help to illustrate the results of the approach. The following is a brief description of the method used in this study.

- Development of Total Capital Need – Based on discussions with the City the incremental facilities and related costs to serve the population through the forecast period reflected in the analysis were developed.
- Calculation of Cost per Persons – Projected persons in the year 2050 were used to produce a fee per person based on the existing and proposed investment in general government and administrative services. Table 6-3 provides a calculation of the impact fee taking that estimated cost per person and applying it to 2035 population to estimate allocable costs through 2035.

General Government and Administrative Services Impact Fee Assumptions

The development of the impact fees required several assumptions. The major assumptions used in the development of the calculated impact fees are as follows:

1. In the development of the capital costs to serve growth, the total existing and projected capital costs of providing services were developed as described previously based on existing asset records and proposed capital expenditures. The total existing and projected investment of \$13.1 million was the cost basis used in the development of the fees.
2. The \$13.1 million in total existing and projected investment was then spread over the projected persons that the facilities would provide service to through 2035 for the City, which is approximately 109,397 units as seen on Table 2-1.

Impact Fee Calculation

Based on the above-referenced assumptions, the allocated capital facilities considered necessary to provide service, and the dwelling unit projections of the City, the general government and administrative services impact fees for residential and non-residential customer classifications were developed. As shown in Table 6-4 at the end of this section, the cost per equivalent impact fee unit by customer classification was estimated.

Description	Amount [1]	
Total Capital Costs to be Recovered From Impact Fees	\$13,119,451	
Weighted Cost Allocation Factor (Residential / Non-residential)	88.0%	12.0%
Net Allocated Capital Cost	\$11,552,508	\$1,566,943
Total 2035 Residential Population / Non-residential Square Footage	109,397	9,723,304
Total Costs to be Recovered per Person / Square Foot	\$105.00	\$0.16

[1] Amounts as shown on Table 6-4.

The following summarizes the calculated general government and administrative impact fees:

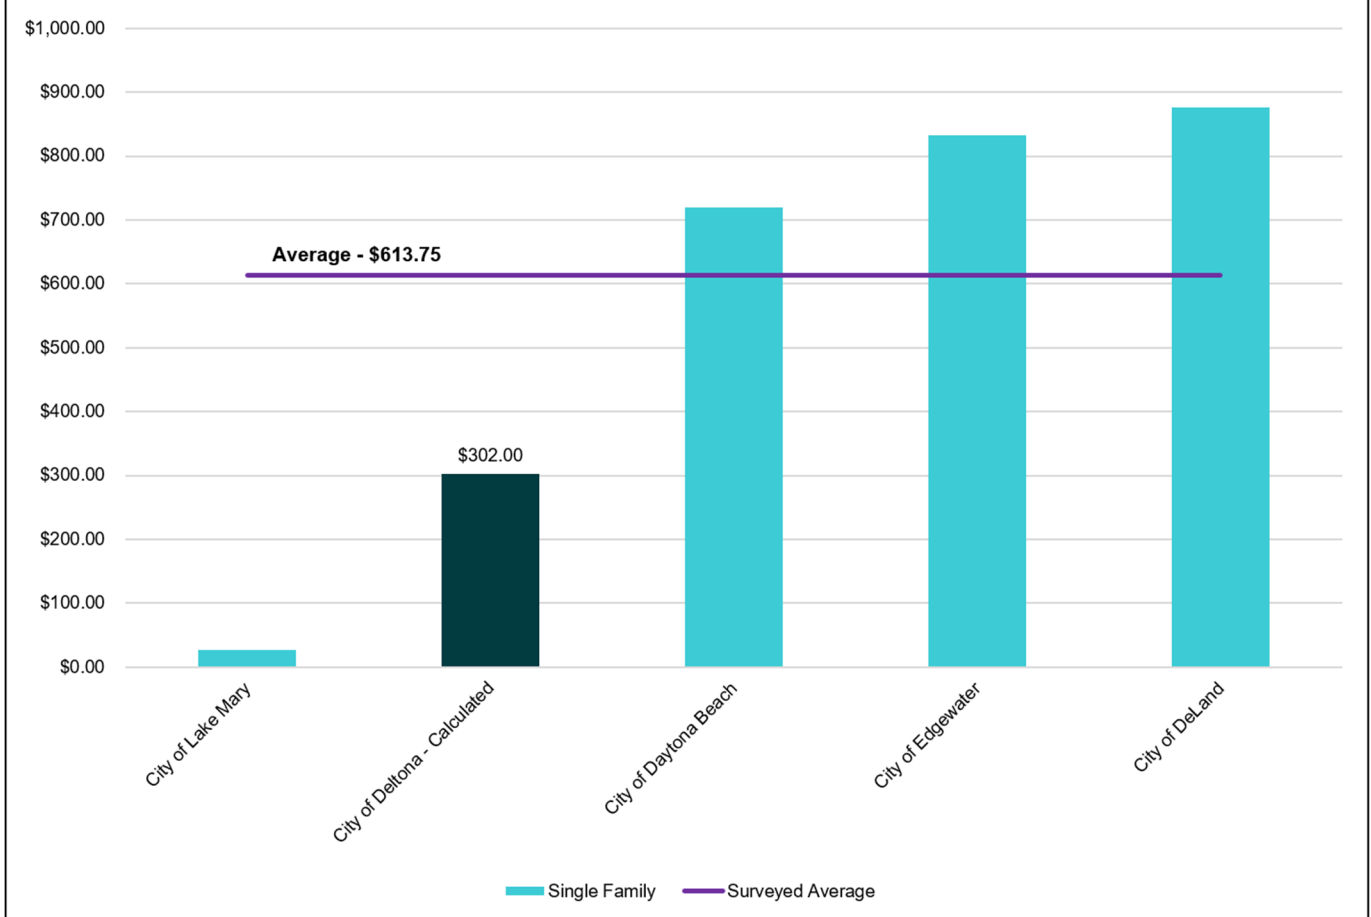

Existing and Calculated General Government and Administrative Impact Fees					
Description	Impact Fee Unit	Existing Fee per Unit	Calculated Fee per Unit	Difference – \$	Difference – %
<u>Residential:</u>					
Single-family @ 2.88 PPU	Dwelling Unit	N/A	\$302.00	N/A	N/A
Multi-family @ 2.63 PPU	Dwelling Unit	N/A	276.00	N/A	N/A
<u>Non-residential:</u>					
All Land Uses	Per 1,000 Sq. Ft.	N/A	\$160.00	N/A	N/A

Taking into account the methodology used for the determination of the fee and the estimates associated with determining the general government and administrative capital needs of the City, we believe that the calculated impact fees are reasonable.

IMPACT FEE COMPARISONS

In order to provide the City with additional information about the calculated impact fees, a comparison of the calculated fees for the City and those charged by other neighboring jurisdictions was prepared. Table 6-4 at the end of this section summarizes the impact fees for general government and administrative services charged by other communities with the calculated rates of the City. It is important to note that these types of fees are not as common across the survey municipalities so the comparison contains less comparable items for review.

Section 7 – Complete Streets Impact Fee Analysis

COMPLETE STREETS

In 2024, the Florida Legislature added definitions of “mobility fee” and “mobility plan” to the Community Planning Act. The 2026 Deltona impact fee study is consistent with these definitions, including capital projects and a plan-based methodology promoting compact, mixed use, and interconnected development served by a multimodal transportation system in an area that is urban in character. The City could impose a “mobility fee” but this would require adding a “mobility plan” into the Comprehensive Plan. To simplify the adoption process, the consultant team recommends a plan-based methodology to provide complete street improvements (i.e., capacity for all modes of travel). In contrast to old-school transportation impact fees that focus on the movement of vehicles^[2], the calculated complete streets fee focuses on moving people by using pedestrian, bike, transit, and vehicular facilities.

Proportionate Share

Raftelis derived functional population using most recent and local data for Deltona (see Tables 2-1 through 2-3). Functional population is comparable to the U.S. Census Bureau’s measurement of “daytime population” that accounts for people living and working in a jurisdiction. However, functional population also considers commuting patterns and time spent at residential versus nonresidential locations. Based on functional population data for Deltona, the cost allocation for residential development is 86%, while nonresidential development accounts for 14% of the demand for infrastructure.

Capital Improvements Plan for Complete Streets

Projects used to derive 2026 transportation fees were extracted from the City’s Master Five-Year Capital Improvement Plan (“CIP”). Every year the City updates the CIP by removing completed projects, adding new projects, and adjusting cost estimates. Because transportation CIP projects will have sufficient capacity to accommodate new development for at least 10 years, the growth cost was allocated to projected development over the next 10 years.

As shown in Table 7-1, Deltona is planning to spend approximately \$28.2 million on transportation projects. The growth cost to accommodate new development (approximately \$6.7 million) will be funded by impact fees. The cost attributable to existing development will be funded by other revenues such as fund balances and grants.

(Remainder of page intentionally left blank)

Capital Improvements for Complete Streets

#	Project Description	Total Cost	Growth Share	Growth Cost
1	Rhode Island Extension	\$21,000,000	29%	\$6,000,000
2	Catalina Blvd Study	\$125,000	10%	\$12,117
3	Traffic Management Study (12 intersections)	\$150,000	10%	\$14,541
4	Elkcam Blvd Shoulder Improvements (Providence to Howland)	\$2,350,000	10%	\$227,806
5	Citywide Trails Master Plan	\$95,000	10%	\$9,209
6	Intersection Improvements (arterial-arterial & arterial-collector)	\$1,700,000	10%	\$164,796
7	Providence Blvd Multipurpose Trail (Thornby to Anderson)	\$1,700,000	10%	\$164,796
8	Saxon Blvd Flyover Study	\$500,000	10%	\$48,469
9	Pave Shoulders on Ft Smith Blvd, Elkcam to Providence (local funds)	\$308,548	10%	\$29,910
10	Deltona Imbedded Pedestrian Lights (local funds)	\$276,145	10%	\$26,769
11				\$0
TOTAL		\$28,204,693	24%	\$6,698,414

Sources:
 1 to 8 from City of Deltona Capital Improvements Plan, Fund 303.
 9 to 10 from FY25/26 to FY29/30 TIP, Volusia-Flagler TPO, pages 28 and 66.

Revenue Credit Evaluation

A credit for future revenue is only necessary if there is a potential double payment for the growth share of system improvements needed to accommodate new development. Deltona plans to fund the growth share of future improvements from impact fees, which is approximately 24% of the total estimated capital cost. A revenue credit is not applicable because impact fees will be used exclusively for the growth share of capital improvements. As shown in Table 7-2 below, projected impact fee revenue roughly matches the growth cost of transportation improvements.

Complete Streets Impact Fees

As shown in Table 7-3, the 10-year growth cost of transportation improvements to be funded by fees is \$6,698,414. Based on the functional population analysis, the cost allocation for residential development is 86%, while nonresidential development accounts for 14% of the demand for transportation improvements. For residential development, the growth cost of improvements is \$543 per additional resident. The transportation fee is equal to the cost per person multiplied by the average number of persons per dwelling unit.

For nonresidential development, the growth cost is \$48 per weekday, inbound, primary vehicle trip. Trip generation rates per lodging room or thousand square feet of floor area are from the Institute of Transportation Engineers (“ITE”). A vehicle trip end represents a vehicle either entering or exiting a development (as if a traffic counter were placed across a driveway). To calculate transportation fees, trip generation rates require an adjustment factor to avoid double counting each trip at both the origin and destination points. Therefore, the basic trip adjustment factor is 50%. As discussed further below, the transportation impact fee methodology includes an additional adjustment to make the fees proportionate to infrastructure demand for commercial development.

For Retail and Eating / Drinking Places, the trip adjustment factor is less than 50% because these developments attract vehicles as they pass by on arterial roads. For example, when someone stops at a convenience store on the way home from work, the convenience store is not their primary destination. For the average shopping center, the Institute of Transportation Engineers indicates that 34% of the vehicles that enter are passing by on their way to some other primary destination. The remaining 66% of attraction trips have the commercial site as their primary destination. Because attraction trips are half of all trips, the trip adjustment factor is 66% multiplied by 50%, or approximately 33% of the trip ends for an average-size shopping center, which is the proxy for Retail & Eating Drinking Places. Nonresidential floor area and trip generation are documented in Table 4.

* Weekday, inbound, primary trips

Projected Impact Fee Revenue

Over the next 10 years, transportation impact fee revenue is projected to be slightly less than the growth cost of capital improvements, which has a 10-year total cost of approximately \$6.70 million. Table 7-2 indicates that Deltona should receive approximately \$6.68 million (rounded) in transportation impact fee revenue if actual development matches the land use assumptions.

Footnotes:

- [1] Unless otherwise noted, amounts shown reflect impact fees in effect as of January 2026. This comparison is intended to show comparable charges for similar service for comparison purposes only and is not intended to be a complete listing of all rates and charges offered by each listed municipality.
- [2] Reflects the lowest and highest rate per square feet.
- [3] The City of Altamonte Springs charges based on zones. Fees shown are for the Mobility Fee area.
- [4] Multi-family transportation fee is determined based on the number of floors. For the purpose of this comparison, the fee shown is based on a multi-family building with 3-10 floors.
- [5] Municipality charges the residential fee based on square footage. For the purpose of comparison, the fees shown are based on the average home size in the City of Deltona: 1,900 sq. ft. for single family and 1,500 sq. ft. for multi-family.
- [6] Mobility/Transportation Impact Fee is assessed by Volusia County
- [7] Mobility/Transportation Impact Fee is assessed by Seminole County
- [8] The City of Maitland charges based on location within the City. Fees shown are based on Mobility Tiers 1 & 2.
- [9] Fee shown is reflective of an apartments unit.
- [10] Seminole County charges mobility impact fees based on location within the County. Fees shown are based on a development within the Core location.
